

Making a slide show in iPhoto.

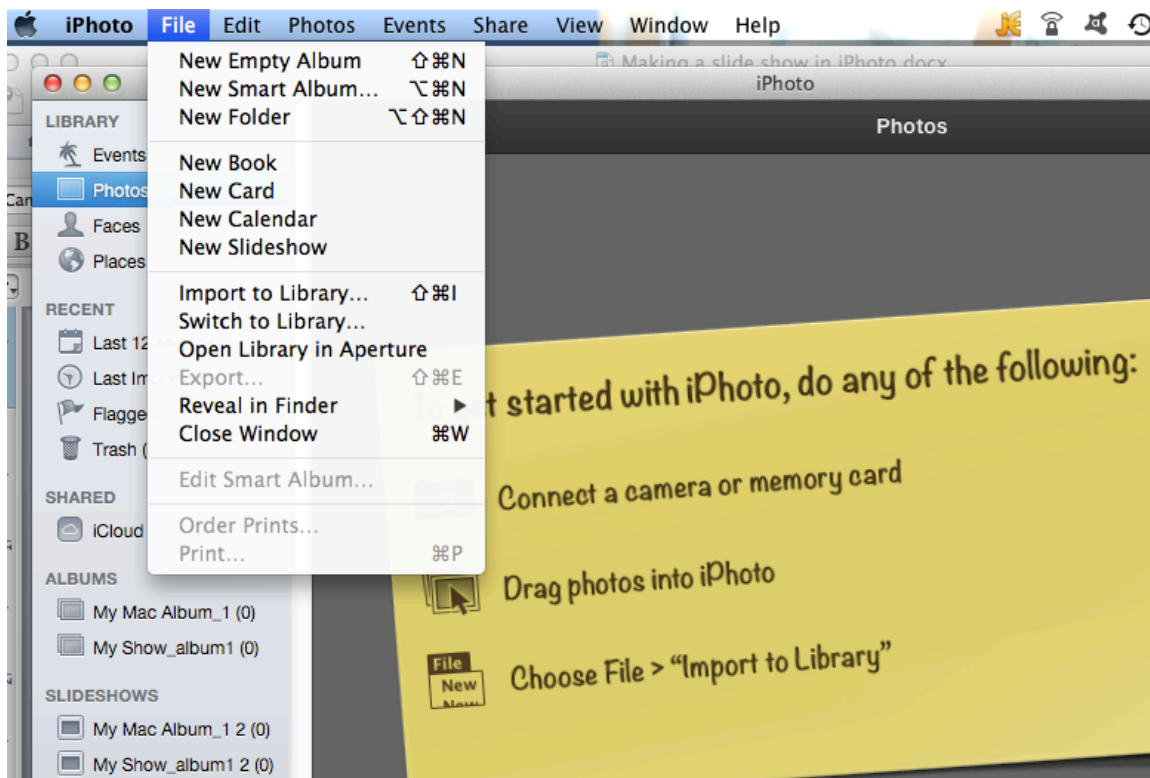

Open iPhoto and select **Photos** folder.

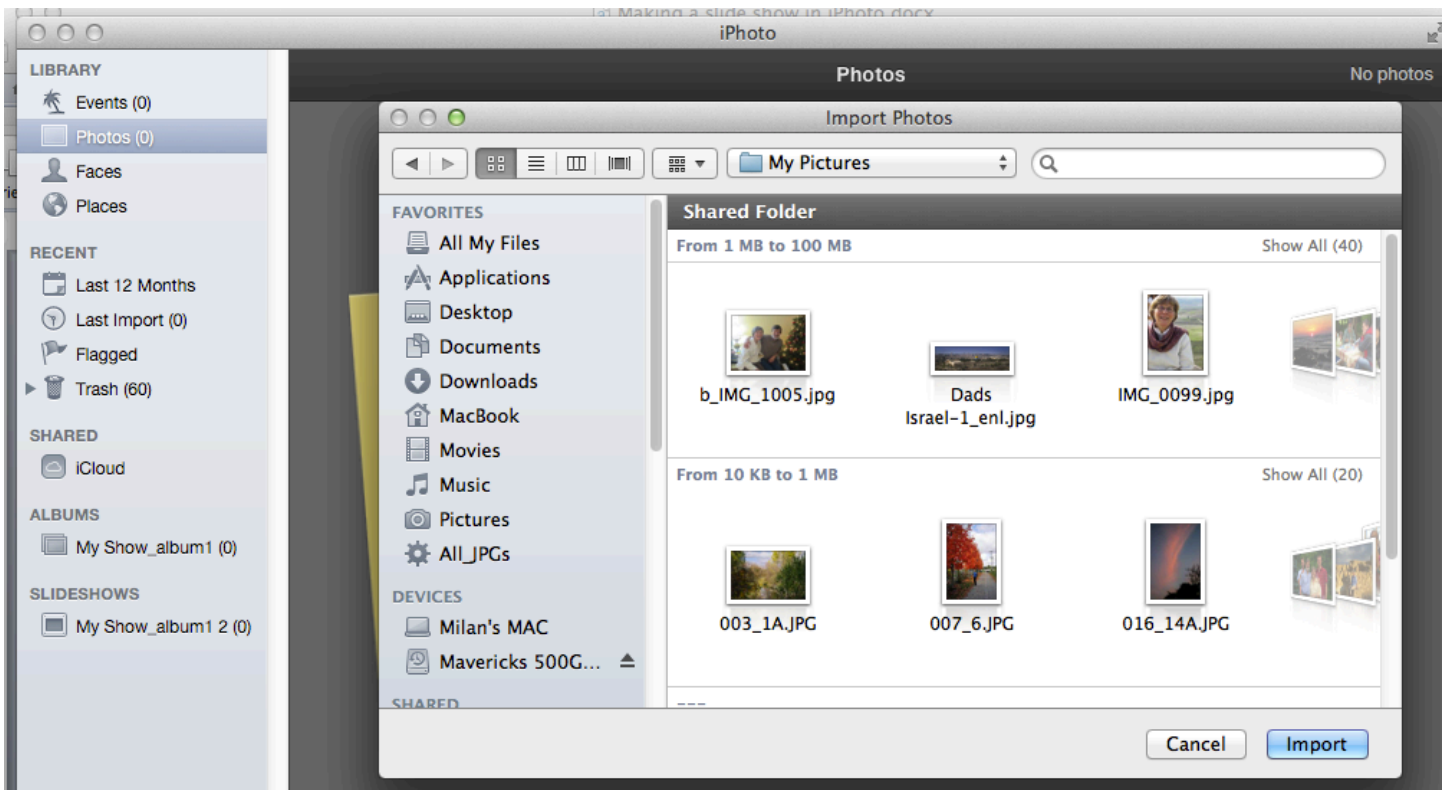

Empty the iPhoto panel (delete all pictures)

You can go to Edit > Select All and Cut (this way they do not go to the Trash, but are deleted)

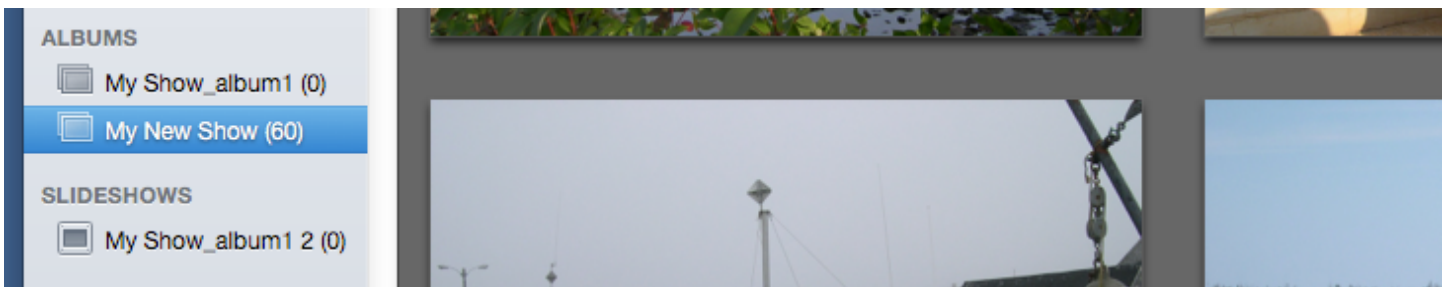

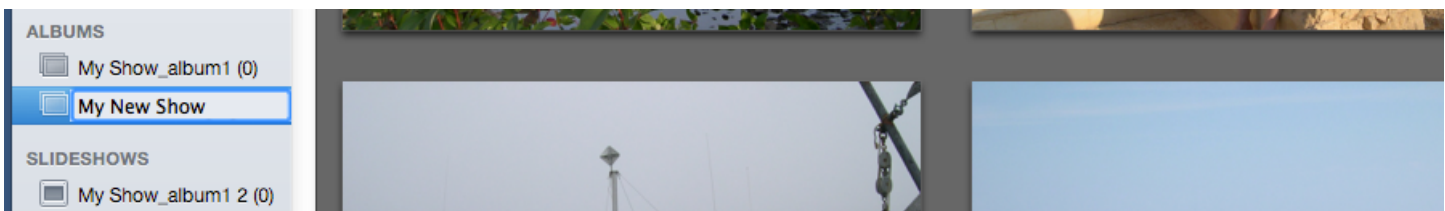

Then click **File > Import to Library** (iPhoto has its own Library) it also has its own Trash – notice there are 32 pictures from the previous deletion.

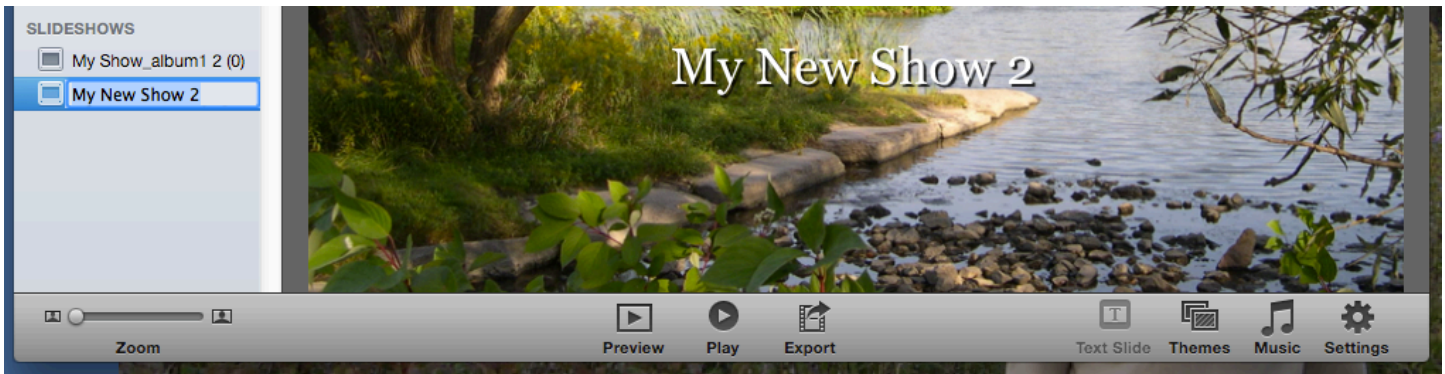

Then navigate to the folder with pictures you want to use, click **Import**.
(You do not have to select all the pictures, by default they are all copied into iPhoto's Photos folder).

Once you have all the pictures you want in Photos folder, select them (usually all) (Command + A)
Then go to **File > New Album** (and name the new album). All the selected photos are placed in this album.

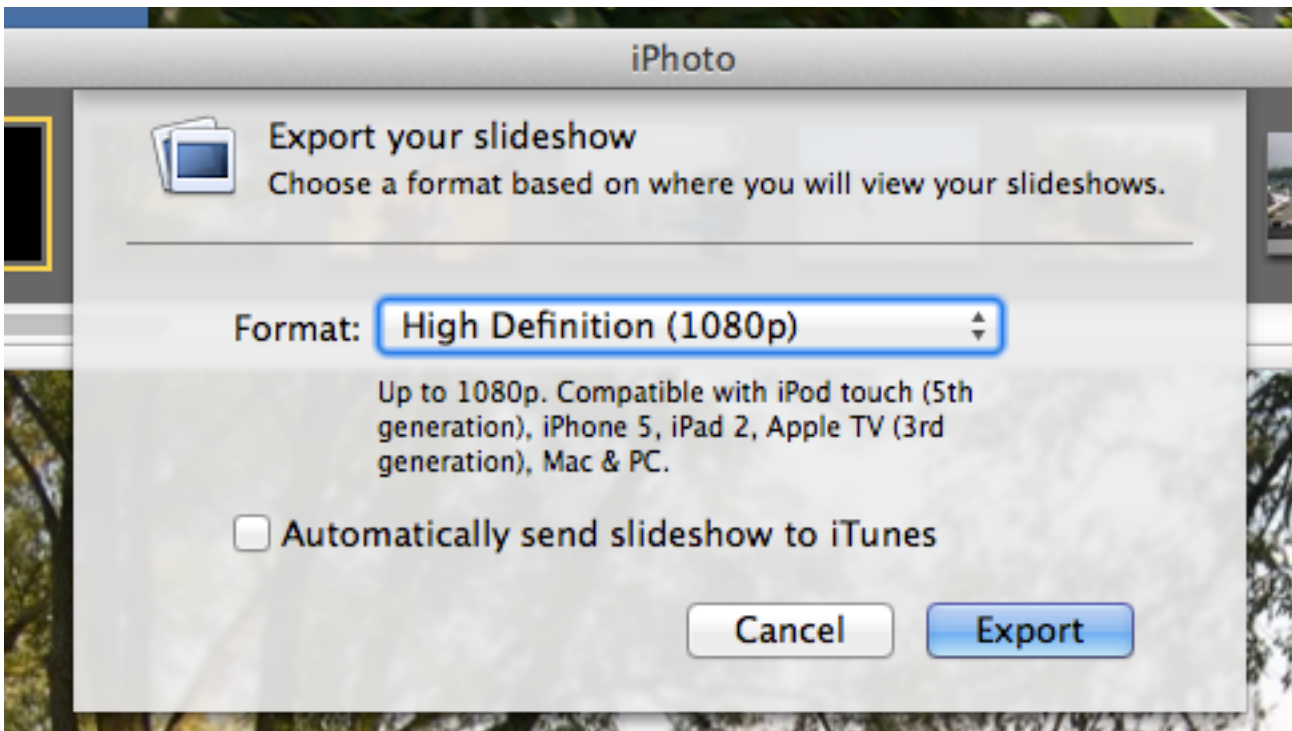

Then click **File > New Slideshow**.

Then set **Themes, Music and Settings**.

Then click **Export** to save your slide show.

And choose the folder where you want to export (save) the slide show.

This will take a bit of time (60 pictures and High Definition .. 1080p). Can expect at least 30 – 40 min. and longer.
